## DETAILED ACTION

### *Election/Restrictions*

1. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

Generically claimed biocompatible, biodegradable synthetic polymer.

The species are as follows:

- a) polyester;
- b) polycarbonate;
- c) polyester-carbonate;
- d) polyanhydride;
- e) polyurethane.

If the polyester is elected, Applicant should show the specific polyester and identify the claims readable on the elected species.

2. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:

The expression “**special technical features**” shall mean those technical features that define a contribution which each of the claimed species, considered as a whole, **makes over the prior art**. The species listed as different copolymers as exemplified in claims 4-8, 14-21, 25, 26 do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, although they share the special technical

feature of a copolymer being a material for the drain, this special technical feature does not define a contribution over the prior art for the following reasons: Claims 4-6 are either obvious or anticipated by US 5,129,889 or US 5,201,724. Accordingly, the special technical feature linking the inventions, i.e. the drain being made of a specific biodegradable polymer does not provide a contribution over the prior art, and no single general inventive concept exists. Therefore the election of species requirement is appropriate.

Applicant is required to elect a single ultimate disclosed specie for each of the above for prosecution on the merits to which claims shall be restricted if no generic claim is finally held allowable. Where specific species are not identified in the claims, Applicant should elect a specific species from the Specification. An alternative method of election is **to identify an example which collectively exemplifies the elected species.**

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims

are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

3. No telephone call has been made to the Applicant or Attorney due to the complexity of the election of species requirement.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.
